

Vigortone Summer Grazer Products With I.C.E. Technology

Vigortone is introducing Summer Grazer Products with I.C.E. Technology that are mineral-vitamin mixes designed to aid in the prevention of nutrient deficiencies in grazing cattle, especially during periods of heat stress. Vigortone Summer Grazer with I.C.E. Technology Products contain relatively high levels of trace minerals, vitamins, calcium, and phosphorus to help assure optimum health, reproductive performance, and forage digestibility.

The nutrient profile of Summer Grazer Products is especially suitable for cattle grazing fescue pastures. In a university trial, cattle grazing fescue pastures and fed Summer Grazer with I.C.E. exhibited lower body temperatures compared to control cattle. Other observations included more daytime grazing and slicker hair coats.

Summer Grazer is also available with 1.4 grams chlortetracycline per pound.

Patent Pending Technology

Reduce Heat Stress in Ruminants

Fescue Grazing Study with I.C.E. Observations:

- **Minimized body temperature increase in cattle when under heat stress**
- **More day time grazing**
- **Slicker hair coats**

Effective for all cattle under heat stress regardless of pasture type.
